

Sustainability Condition #1

In order for a society to be sustainable, nature's functions and diversity are not systematically subject to increasing substances extracted from the earth's crust

Sustainability Condition #2

In order for a society to be sustainable, nature's functions and diversity are not subject to increasing concentrations of substance produced by society.

Sustainability Condition #3

In order for a society to be sustainable, nature's functions and diversity are not systematically impoverished by physical displacement, overharvesting, or other forms of ecosystem manipulation.

System Condition #4

In a sustainable society, people are not subject to conditions that systematically undermine their capacity to meet their human needs.
